Application Performance

HF Current Signal

30A 0.1V/A

High frequency AC/DC current probe can easily measure signals over 20MHz (Yellow waveform on CH1)
Signal is completely distorted when measured by Low frequency current probe (Blue waveform on CH2)

Surge Current

6A 0.5V/A

Surge current waveform at power adapter startup

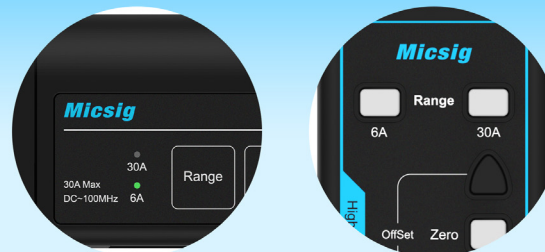

Easy Measurement

Exquisite Appearances

Delicate probe head, can be held in one hand, easy to operate, suitable for various complex measurement scenarios

Overload Indication

When current is overloaded,
CP503/CP1003: 2 Range LED indicators flash alternately
CP503B/CP1003B: Corresponding Range button indicator flashes

Degaussing/Auto Zero Setting

After power on, the probe will automatically zero and degauss

CP503/CP1003: Press the buttons "△" "▽" at the same time until the range LED green light turns off and then release, the probe will carry out Degaussing and Zero setting
CP503B/CP1003B: Press the Zero button "□", light on, the probe will carry out Degaussing and Zero setting

Measurement on the go

Standard dedicated suitcase, trouble-free when using outdoors
